DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 08/24/06 has been entered.

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 11-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Rubin in view of Nakamura et al (USPN 4,359,455). Rubin discloses an endodontic device 10 for detecting moisture within a root canal comprising an endodontic cone as shown in Fig. 2 formed of water absorptive material and a moisture sensitive chemical indicator. There is a pH-changing indicator applied to the water absorptive material; wherein the endodontic device changes color when moistened with water. However, Rubin does not teach a pH changing material that enhances a change in color of the endodontic device when the cone is moistened with water compared to a change in color of an endodontic device without the pH changing material.

Art Unit: 3732

Nakamura et al teaches that "alkalis are used for adjusting the pH value of a composition"(see column 5, lines 35-36). Regarding claims 12-13 and 15, the pH changing material may be selected from a variety of elements (see col. 5, lines 36-46). It would have been obvious to one having ordinary skill in the art at the time the invention was made to incorporate a pH changing material such as an alkali to the endodontic device in order for the change in the pH to be more readily detectable, thereby allowing any moisture in the root canal to be more easily recognized by the dentist.

Allowable Subject Matter

Claims 25-29 and 32 are allowed.

Response to Arguments

Applicant's arguments with respect to claims 11-15 have been considered but are moot in view of the new ground(s) of rejection.
